

Article for the Australian Technology Showcase – NSW Department of Trade and Investment

Debraneys Pty Ltd, an alumni member of the Australian Technology Showcase, was recently awarded a contract by NSW Maritime to install their award winning “Debraneys Security Management System” (DSMS) software in its Maritime Property Division.

The DSMS software will enable far greater utilisation of existing core IT software services such as Mapping, Finance and Content Management while bringing Maritime staff into sync with the prevailing policies and procedures of NSW Maritime and other agencies. Each audience within the Maritime Property Division such as Domestic and Commercial Property Management, Planning and Engineering will be provided with software tools and access to information that supports their role and particular, expert, perspective on the managed assets of the organisation.

The installation of DSMS software is a ground-breaking approach to addressing the complex problems being experienced by organisations in managing multi-faceted information needs. The outcome of this approach ensures that future changes in either the core IT systems of NSW Maritime, or relevant policies and procedures, will be accommodated without the need for major IT intervention.
